

PSi PP 803C in medical logistics

Medical logistics are subject to special regulations and this poses great challenges for the transport companies. It is not just about the transport of medical products from A to B, but also about special services that ensure and improve medical care. Here perfect logistics solutions are necessary to ensure a smooth process.

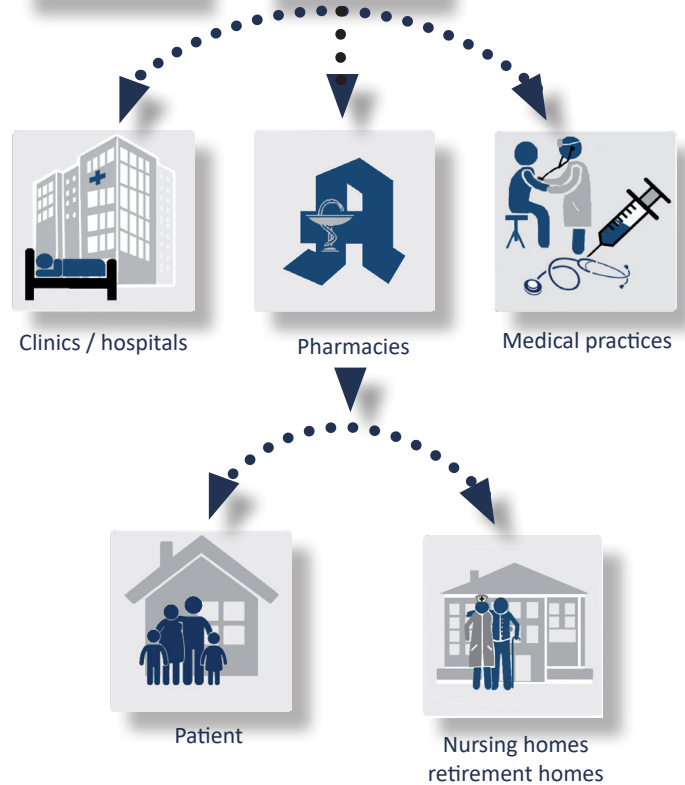

Medical logistics printing requirements:

• Printing of delivery note / invoice documents:

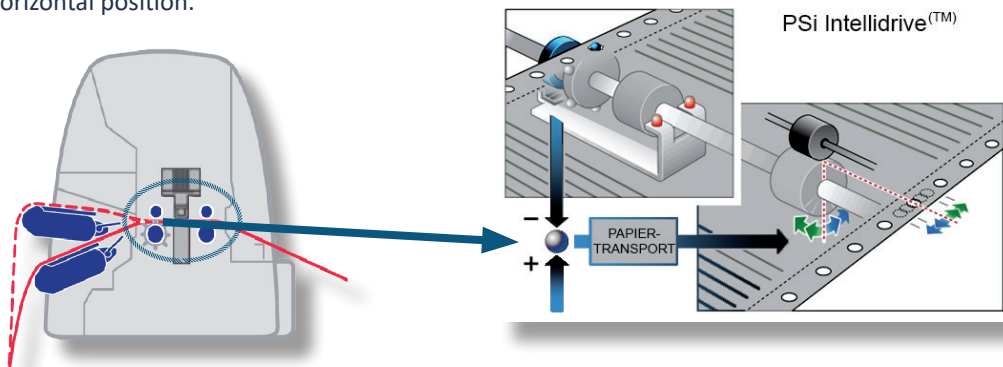

- Dispatch of finished medicinal products for direct pharmacy delivery.
- Temperature-controlled pharmaceutical consignments for pharmacy delivery.
- Transport of medical and technical equipment to e.g. Hospitals or healthcare facilities.
- Transport of medical articles for temporary storage

• Printing of accompanying documents:

- Customs documents
- Labels
- Storage documents (storage and retrieval slips)
- Weighing tickets
- Security certificates

PSi Matrix GmbH contributes to this through the excellent processing of the printing tasks of the individual documents relating to logistics. The unique Intellidrive (TM) of the PP 80x series monitors the paper transport and automatically compensates for any deviations in the horizontal position.

Thanks to an integrated cut-off function, individual print sections can be separated and output in the correct shape depending on the rear or the front tray. This saves additional intervention through manual separation. Options around the Paper inlets- and outlets offer additional opportunities for versatile paper handling. Thanks to the modular interface system, PSi printers can be connected to almost all system environments.
